

Microsoft 365

Secure data interchange with counterparties

⚠️ Challenge:

- Exchange data with external organizations, with minimal risk of data theft or leakage by a third party
- Reduce the chance of external parties misusing shared data
- Maintain security of incoming data even though the contractor may have no security system

👍 Solution:

- Document encryption and conditional access policies enable secure e-mail transfer even to public domains
- Enable secure access to corporate services and apps for contractors with their own login data.

Benefits:

- Protection of sensitive corporate data
- Secure access to corporate applications and confidential correspondence for partners and counterparts
- Secure data and content sharing with external users

Scenarios

- No tools that ensure secure information transfer to external users
- The employees of external organizations do not have access to corporate applications and services.
- No established policy and solution for 3rd party employee authorization in corporate services and applications.

Solution capabilities

- Identity and access management with advanced protection
- Secure single sign-on, conditional access, and advanced security reporting
- Classification, labeling, protection and audit data for security
- Risk-based conditional access ensure personal data protection
- Intelligent classification and encryption for files shared inside and outside your organization

Tech and products

- Azure Information Protection
- Cloud app Security
- Azure Active Directory Premium
