

Microsoft 365

Mobile device and application management

⚠️ Challenge:

- Ensure secure, comfortable work of mobile employees
- Protect corporate data on mobile devices and apps.
- Reduce risk of potential access to corporate information thru a stolen or lost mobile device

👍 Solution:

- Manage various functions of Windows, iOS, and Android phones, as well as laptops and PCs on Windows 10.
- Remote software, profile and certificate installation
- Mobile device security policies ensure integrity and safety of corporate files and user account data.
- Remote selective or complete mobile device wipe for lost or stolen devices

Benefits:

- New mobility use cases that create business value
- Convenient and secure work of mobile employees
- Protection of corporate data on mobile devices

Scenarios

- Corporate services are not accessible from mobile devices.
- No mobile device management
- No conditional access policies for mobile devices.
- Corporate files and documents stored on mobile devices are not protected
- Administrators are unable to remotely wipe employees mobile devices.

Solution capabilities

- Mobile device, PC and laptop management tool support Windows, iOS and Android
- Remote software installation and complete/selective wipe on mobile devices
- Delimitation of personal and corporate data to control corporate data transfer
- Policies for conditional access to corporate services
